The Survey of COVID-19 Related Needs & Concerns was administered to all Graduate Students enrolled at Spring 2020 Census. The survey was structured in two parts: part one focused on basic needs concerns while part two concentrated on concerns over academic progress and productivity.

Of the 11,477 students invited, 2,455 (21.4%) completed the survey. As a whole, Whites (26%), Underrepresented Minorities (URM) (23%) and those of unknown ethnicity (23%) responded at a higher rate while Asian/Pacific Islander (16%) and International (18%) students were somewhat less likely to respond. Graphics in this report were chosen to highlight differences in responses among groups.

### Housing & Basic Needs

Half of URM respondents and nearly half (48%) of International students indicated that they were concerned or very concerned about their ability to pay for housing after May during the COVID-19 crisis — at least 10% more than all respondents taken together.

42% of URM students indicated that they were concerned or very concerned about meeting other basic needs such as food or medicine after May — 12% more than all students who answered this question.

"It’s been really difficult. Both of my parents are unemployed, I’ve had two deaths in the family, one of my uncles is recovering from COVID19, and yesterday I found out that my internship offer has been withdrawn due to the virus. I can no longer count on that income." - a student comment

Regarding expected campus support needs, female students were more likely (54%) to choose Healthcare needs while male respondents favored Financial Aid support (56%). Both female and male respondents also identified a strong need for Mental health resources, with 16% more females choosing this option than males.

"I am very concerned how this will impact my stipend, my field placement (internship) next academic year, my graduation date, and my employment. I’m worried I won’t learn the necessary skills to prepare me for being the social worker I hope to be after graduation.” - a student comment
Academic Progress & Productivity

URM students were 12% more likely than other respondents to say that the challenges associated with the transition to distance learning has negatively impacted their mental health and/or overall sense of well-being:

URM students were also 19% more likely to respond that the challenges associated with the transition to distance learning have negatively impacted their ability to be productive as it relates to progress toward their degree:

When asked directly about the COVID-19 pandemic’s academic impact, more students expressed strong concern (indicating that they felt concerned or very concerned) about the impact on their academic progress than on their financial stability:

Plans for the Fall 2020 Term

When asked about plans for re-enrolling at UC Berkeley for the Fall 2020 semester, 76.6% of respondents affirmed that they planned on returning to campus under normal operations or under remote instruction.

However, 11.4% of respondents indicated that they do not plan to (or are not sure if they will) re-enroll in the Fall term. When asked why they don’t plan to (or aren’t sure if they will) return to campus this fall, the 227 students (11.4%) identified the following reasons:

Students who chose the “Other reason(s)” option were asked to elaborate, and many of their text responses question the value proposition of distance education, while other responses were related to pending graduation over the summer.
